Each pack of filler contains 10 x 30cm sticks suitable for Hot Melt Filler Gun.

813 Series Filler

This range of fillers comprises the following colours; White, Knot, Ash, Pine, Beech & Oak. This is the most flexible of the three different grades of filler and has a melting point of 140° C. This filler can be sanded after the surplus filler has been removed.

134 Series Filler

This set comprises 4 different colours, Black, Walnut, Pine Light and Mahogany. It has a higher melting point of 160°C. This is less flexible than the 813 series but it is a harder compound and slightly easier to cut off. It can also be sanded using normal abrasives.

162 Series Filler

This is the hardest of the compounds and has been specifically designed for the flooring trade so that excess filler can be removed by belt sanders rather than having to cut surplus filler first using the cutting tool. It is available in the following colours; Transparent, Mahogany, Rosewood & Wenge. This filler has a melting point of 190°C.

HMRB - Contents to include x2 15cm sticks of each 134 Pine, Walnut, Mahogany & Black
